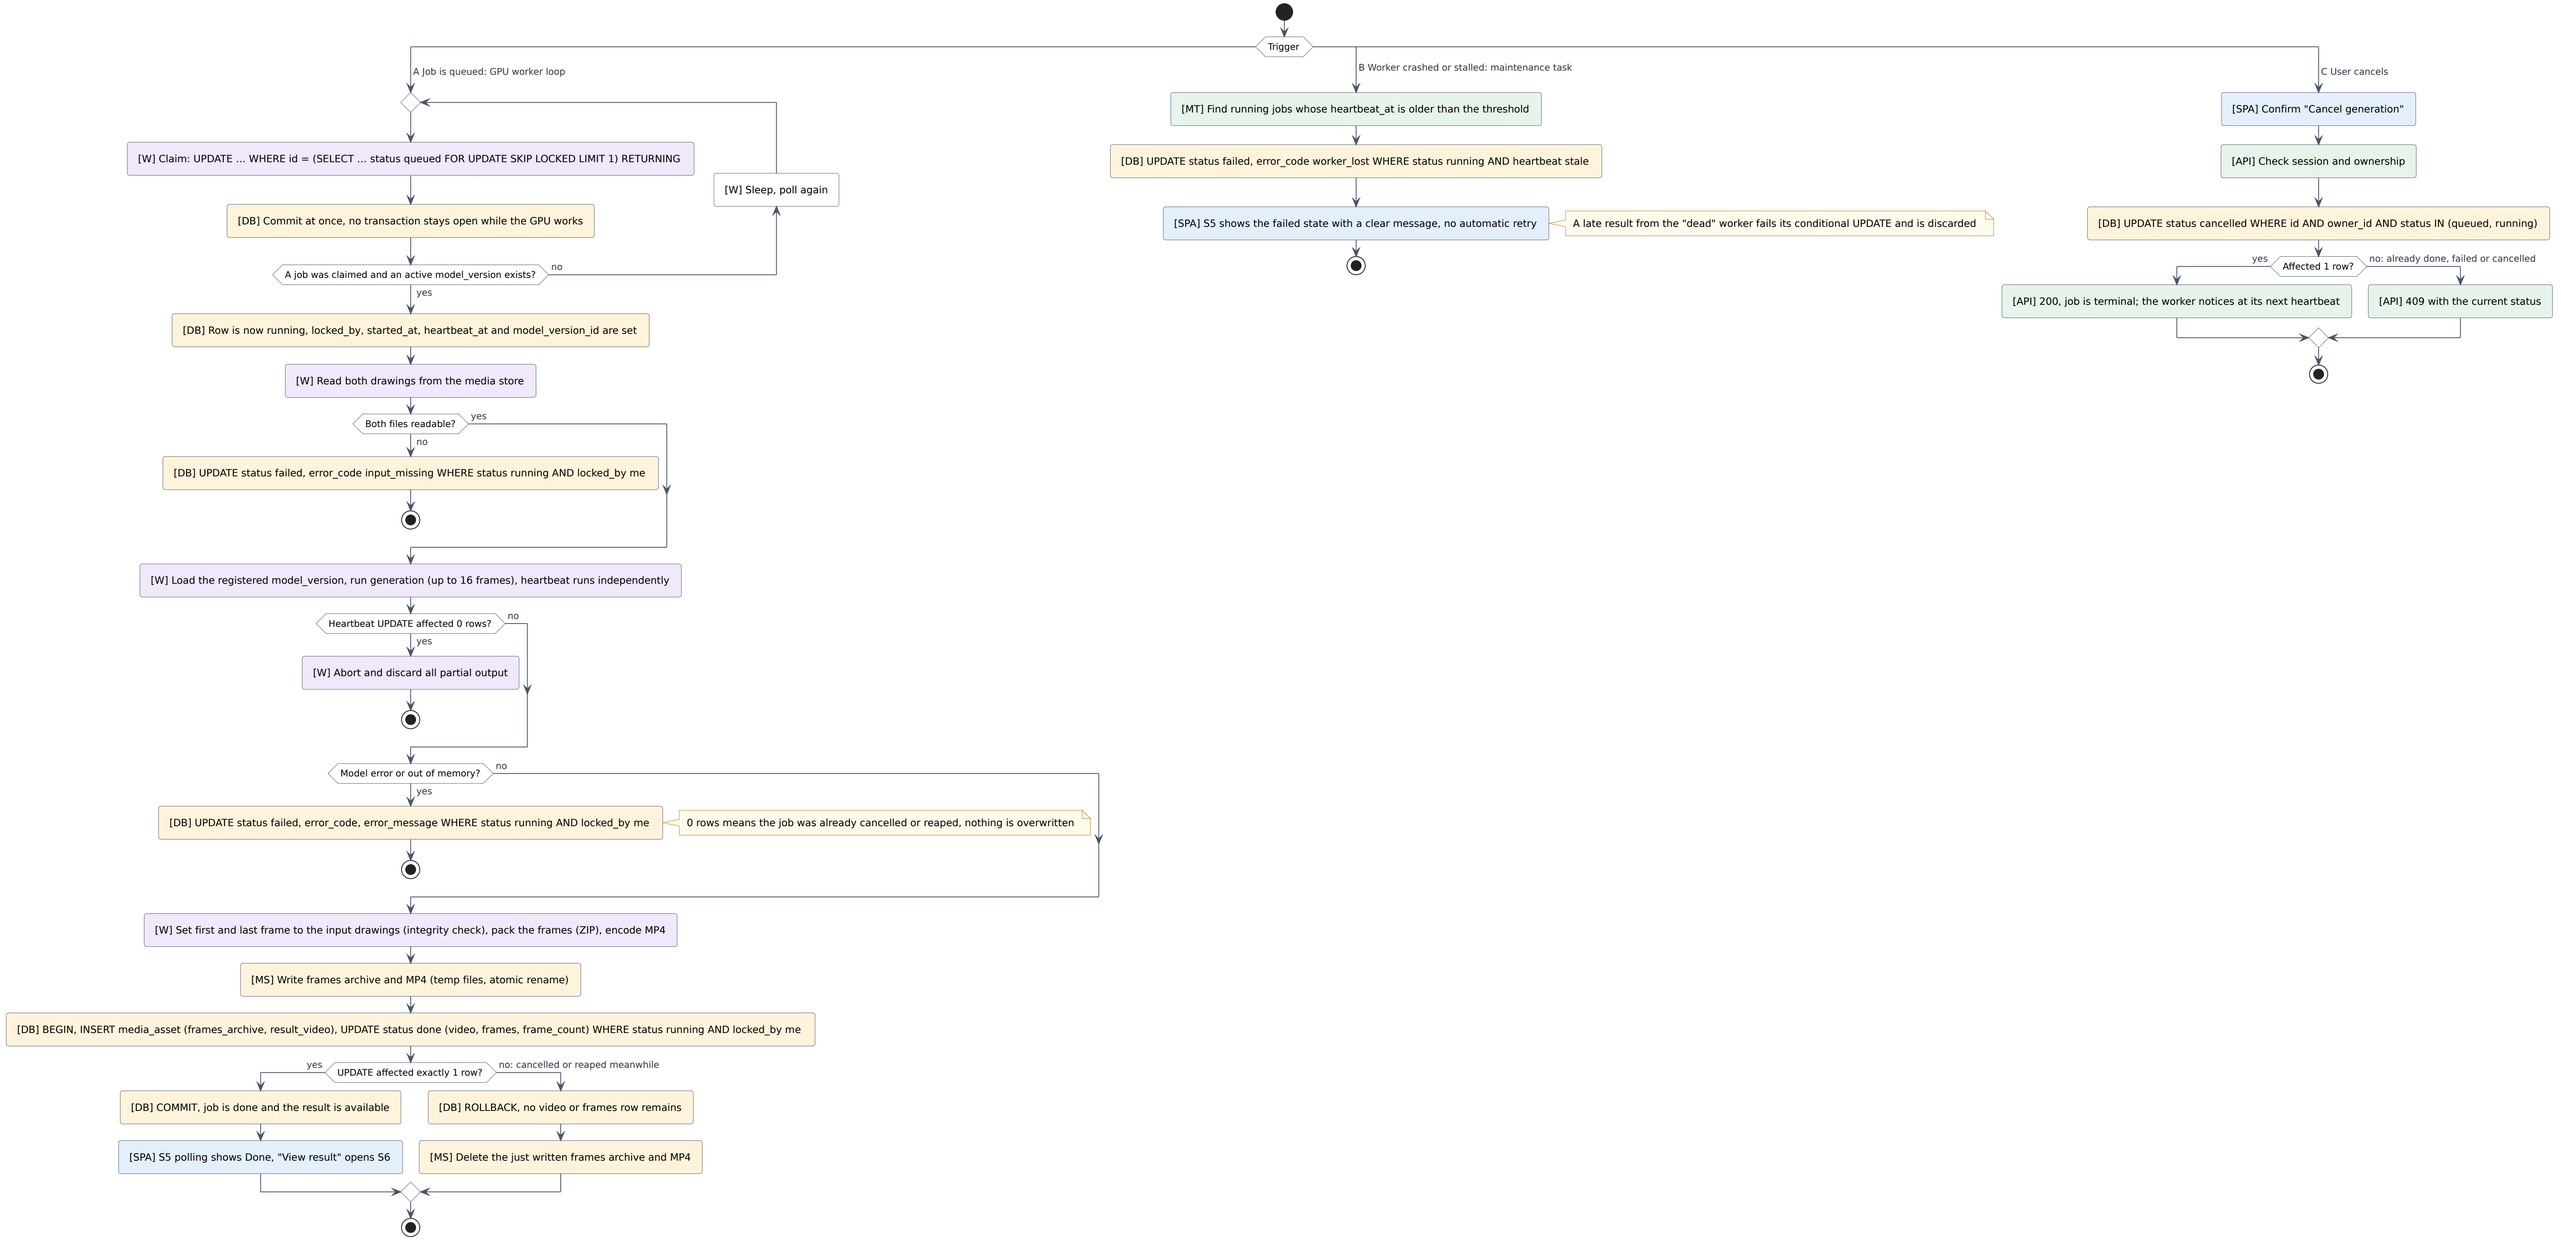
Cue — Job Execution and Failure Flow (FR-06, FR-07, FR-10, NFR-03)
Three independent triggers act on animation_job; every state change is a conditional UPDATE



Box colour = layer: blue SPA, green API/maintenance (MT), amber DB or media store (MS), purple GPU worker (W).
Terminal states (done, failed, cancelled) are never updated again; each UPDATE is guarded by "WHERE status = expected".
Timestamps use clock_timestamp(), not now() (finding F-01).
